

AESTHETIC OPTIMISATION

Aesthetic surgery includes all the services that are not necessary for treating a disease. These treatments are meant for aesthetic optimisation, and sometimes, this could also be a combination of aesthetic optimisation and correction of a health problem.

Reverse Facelift

One speciality of the *Klinik Professor Sailer* is the *reverse facelift*, wherein the facial tissue is firmed up from the inside. This gives rise to a younger look that far surpasses all other methods and lasts life long.

Dimples

One exclusive feature of the *Klinik Professor Sailer* is the creation of dimples on the chin and cheeks. Dimples give an extremely charming aspect to a smile .

Nose operations

Nose operations are always a special challenge, because they need to bring both the aesthetic aspects (form) as well as the function (breathing) into harmony. Prof. Sailer has 30 years of experience with both purely functional operations, such as straightening the septum, as well as aesthetic interventions (e.g. reducing hooked noses).
